During the weeks that went by the supervision and the inspection was done at the Wind tower I site by the consultant and Jafza and it was approved where the concrete finally arrived and certain tests were done to check the high quality of the product. During the previous week huge amount of concrete was poured where currently curing is done which is a 7 day process where the concrete should be kept within a certain temperate a wetness.

The amount of concrete to be poured for the foundation is 4,500 m³ which equals to the amount of concrete used to build a 20 storey building.
